MEDICATION ALERT

Oedema medication – Kaluril - now in short supply

Kaluril, an important medication used in the treatment of oedema, hypertension and fluid build-up associated with liver disease, has just been added to the TGA's Medicines Shortages List with supplies not expected to return to normal in Australia until at least **31 October 2018**.

"Manufacturing" is the reason given for the shortage by Alphapharm, the manufacturers of Kaluril.

If you have customers you believe will be adversely affected by this shortage, there is a solution:

With a script from their doctor, National Custom Compounding can make up supplies of Kaluril for your patients.

As a fully-licensed third party compounding pharmacy, every day National Custom Compounding safely compounds made-to-order medication on behalf of community pharmacies around the country.

We act as a third party compounder and we partner - not compete - with community pharmacies to deliver a comprehensive range of pharmacy services.

You deal with the customer and we'll deliver the goods.

For more information on how we can make up supplies of Kaluril for your customers, I welcome you to contact me personally on 0416 125 136 or matt@customcompounding.com.au. You may also like to visit our website www.customcompounding.com.au for more information.

I look forward to hearing from you.

Kind Regards,
Matthew Bellgrove
Managing Director & Compounding Pharmacist
